Executive Summary & Next Steps

The scope of the visit covered all operational and storage areas of the store. Overall, the store is performing very well, with no points lost in the Systems and Customer Service sections, which reflects strong processes and excellent team performance.

However, there are opportunities for improvement in certain details. Key areas to focus on include cleaning equipment and workspaces immediately after use and ensuring all products are properly labelled. These are small but important practices that help maintain hygiene, safety, and operational standards.

These findings do not indicate any major operational issues, but they highlight the need for continued attention to detail and consistency. Addressing these points will support ongoing compliance and help the store maintain its high standards in future visits.

Section 1 - Operational

Flagged Items

1 Flagged

1.10 Fruit, chopping boards, knives and general area are being cleaned regularly. Is equipment cleaned after use (jugs, jiggers, blenders)?

Flagged Items

Section 4 - HSE/HSA

4.48 Hand washing is taking place regularly & whenever the team go on to retail areas. There are separate sinks for hand wash & equipment, which are clearly marked, well stocked with soap and paper towels/blue roll. Gloves are being changed regularly. Blue roll should be kept in a container to prevent contamination and maintain hygiene standards.

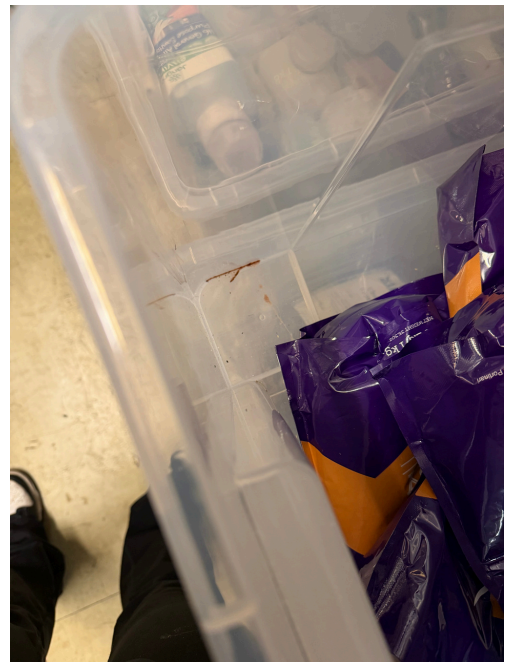

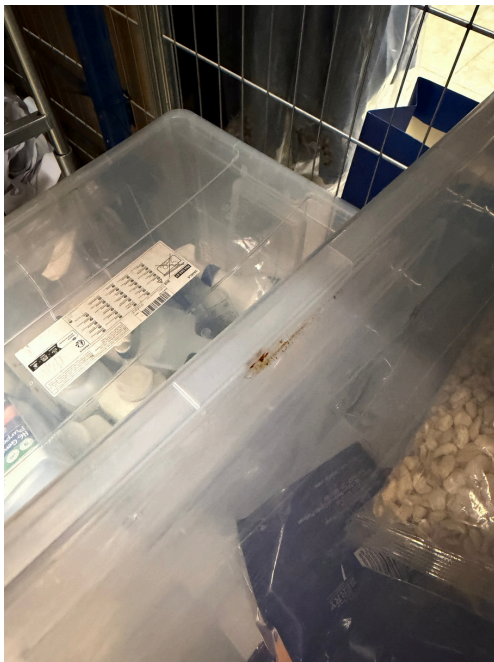

4.47 All products on sale and in the stock room are in date with label. All prepared products must be labelled to ensure traceability, food safety, and proper shelf-life control.

4.50 Ice Machines, walls, bins and handling equipment should be clean and sanitised. Scoop should not be kept inside the machine, instead beside it in a plastic tub with a lid. (Records on main log book). The scoop must be kept in a container with a lid to avoid contamination.

4.52 Store rooms and preparation rooms (if applicable) are clean and well organised (including floors and under shelving units). All stock is in a plastic box and no stock should be on the floor. Offices and break areas & appliances (if applicable) are clean and well maintained. Clean storage boxes are essential to protect products and uphold food safety standards.

4.53 All bottles and containers are labelled clearly and correctly, with dates - and the cleaned bottles/containers without old labels.

Don't leave a label on a clean container because it can harbour dirt or bacteria around the sticky area, making it harder to sanitize properly. Labels can also peel off, leave residue, or transfer contaminants to the container or food, compromising hygiene.

4.54 Acai is being defrosted according to correct procedure, and fridges and/or freezers are being defrosted and cleaned regularly. The açai lacked information on defrosting, arrival date, and BBF. My suggestion is to use a whiteboard, which is easier than labeling each bucket individually.

- Arriving date (for frozen acai)
 - Defrosting date
 - Use date
 - BFF date
-
