Executive Summary & Next Steps

The scope of the visit covered all operational areas, including hygiene standards, HSE compliance, operational procedures, customer service, and system adherence.

The store presented a very high operational standard during the visit. Customer service, operational execution, and system compliance were impeccable, with no points lost in these categories. The team demonstrated strong attention to detail, consistency, and commitment to maintaining brand standards throughout the operation. All points raised during the previous visit had been reviewed, corrected, and improved, reflecting excellent follow-up and engagement from the team. The overall performance of the store is highly commendable, and the team should be congratulated for the significant improvements achieved.

Some minor HSE-related observations were identified and require attention to ensure the store continues progressing towards the highest possible standards. Temperature monitoring for the day of the visit had not been completed and must always be carried out according to food safety procedures to ensure compliance. The microwave requires regular cleaning to maintain proper hygiene standards and ensure compliance with HSE requirements. Additionally, the sink cloth must be replaced regularly to prevent deterioration and maintain appropriate hygiene conditions.

Although these observations are minor details, greater attention and consistency in these areas will support the store in achieving the best possible operational and HSE standards. Overall, the store performance was excellent and reflects a very strong and committed team.

Flagged Items	3 Flagged (82%)
Action Required	

4.49 Temperature checks are taking place - check three days at random. Corrective action and temperatures are re-recorded if applicable. Is traceability completed correctly? Is the defrosting process followed correctly and documented? The morning temperature on the day of the visit had not been recorded. Attention must be given to ensuring compliance with HSE requirements.

4.51 The following equipment is clean (inside, outside, handles, door seals and underneath) and in good working: All fridges, freezers, acai machines, coffee machine, microwave. The store microwave requires cleaning to maintain proper hygiene standards and ensure compliance. This item should also be added to the cleaning checklist.

4.57 Sinks and surrounding areas are kept clean, and uncluttered. Are cleaning tools in good condition? Are kitchen and prep areas clean and sanitised? The sink cloth is in poor condition and must be replaced regularly.
